

APEX TiC-80

Hardfacing Grit 30/50

Description

High-performance Titanium Carbide (TiC) based grit engineered to replace traditional Tungsten Carbide (WC), for extreme wear and abrasion applications. Offering superior volumetric yield and a competitive wear performance.

Chemical Composition

Titanium Carbide (TiC) particles bound in a heavy-duty engineered alloy matrix.

Typical physical properties

Nominal mesh	Mesh	Hardness	Density	Appearance
30 - 50 Mesh (0.300 mm – 0.600 mm)	+30: < 2.0% -30/+50: > 85.0% -50: < 10.0%	> 2800 HV	~4.9 - 5.2 g/cm ³ (High Volumetric Advantage vs WC)	Homogeneous, clean metallic-gray particles

Application process

Optimized for GMAW Drop-feed / Vibratory overlay.

Superior wettability with steel & nickel-base matrix wires.

Highly recommended for high-abrasion applications requiring a higher carbide concentration.

Packaging

55lb Bucket.
